

NOTIFICATION

Sofiyska Voda informs all interested physical and legal entities for an organized public discussion in connection with the intent of the company project Methane capture and cogeneration in Kubratovo wastewater treatment plant to be registered as voluntary carbon mechanism Gold Standard.

The installation was commissioned in 2007 as a project for Joint Implementation under the Kyoto Protocol to The United Nations Framework Convention on Climate Change.

As the period of validity of Joint Implementation has expired, the project may be prolonged through a voluntary carbon mechanism. Over the period after 2012 Gold Standard has been the preferred mechanism for companies, which have implemented projects in the field of environmental protection to support subsequent rehabilitation and sustainable development of the constructed facilities and extension of the environmental impact.

The discussion will be held in the administrative building of Kubratovo WWTP on April 15th, 2015 at 10:00 a.m. For those who want to attend there will be organized transport. A van will leave from the parking in front of the Municipality of Sofia at 9.00 a.m.

For contacts regarding the public discussion:
